LAURIDALE INTRODUCTION

Welcome to our 19th On-Property Auction. The rams chosen are our best selected on Lambplan performance and confirmation.

Lauridale Poll Dorset Stud was founded in 1981 with the purchase of the entire Flock No 738 (which was founded in 1964). In 1985 the White Suffolk Stud was commenced using rams from the University of NSW (PLG).

We have been testing the sheep, firstly with NSW Dept of Ag Meat Sheep Testing Service then Lambplan, to help in our decision-making since 1984.

INDURO INTRODUCTION

Induro Stud founded in 2003 by Max's eldest son Guy. Induro rams in the catalogue denoted by an In at the start of the tag number

Brucellosis Accredited Free since 1983

Johne's MN3

Note Induro rams are MN3 Vaccinated

Lambplan

LAMBPLAN provides accurate information on the genetic merit of individuals in our flock. In LAMBPLAN, performance and pedigree information is combined to give Australian Sheep Breeding Values. **ASBV's** are calculated from systematic combinations of performance information on individuals plus their relatives. They are expressed as the difference between an individual's genetic merit and the genetic base to which the animal is compared.

Australian Sheep Breeding Values are provided in SIX main traits:

Birth weight (BWT): Estimates the genetic difference between animals in liveweight at birth. (Kgs)

Weaning weight (WWT): Estimates the genetic difference between in liveweight at 100 days of age.

Weight: (PWWT): Estimates the genetic difference between animals in liveweight at 225 days of age.

Fat: (PFAT): Estimates the genetic difference in GR fat depth at 45kg liveweight.

Eye Muscle Depth (PEMD): Estimates the genetic difference in eye muscle depth at the C site in a 45kg live weight animal

For more information on understanding Lambplan please don't hesitate in asking or visiting <http://www.sheepgenetics.org.au/Breeding-services/LAMBPLAN-Home>
